Connect the Digestive Organ with its Name and Function

Organs	Organ Names	Organ Functions
	appendix	Stores & releases bile into small intestine to make food nutrients less acid
	tongue	Takes up any left over water, vitamins & electrolytes (the water & electrolytes in food waste)
	esophagus	Moves the food around in the mouth to help break it down and mix it with saliva
	gall bladder	Long, muscular tube that squeezes food down into the stomach
	large intestine	Digests, absorbs up water & all the nutrients are absorbed into blood
	liver	A storage tank for digesting food by mixing it with powerful acids to help break it & break it down (protein digestion begins)
	pancreas	Makes & releases a chemical that breaks down energy from the stomach
	salivary glands	Makes bile made in the liver
	small intestine	Makes bile to break down fat, vitamins & break it down (protein digestion begins)
	stomach	Makes bile to break down fat, vitamins & break it down (protein digestion begins)
