Bear apprentice 2 owners manual. Bear archery apprentice 2 owners manual.

Even Even without these extra accessories though, the noise levels are still far from being annoying. The Bow's Draw Cycle As you'd expect from a compound bow made specifically for beginner youth shooters, the Apprentice 2 has an extremely smooth draw cycle without any humps or sudden ramp ups in resistance. This is a perfect compound bow for children, youth, females, and males with a smaller frame (5'6" and below). The Apprentice 2 Eccentric System (cams) The Bear Archery Apprentice 2 comes with a Twin cam system, comprised of two perfectly round wheels. Twin Cam systems are particularly popular in youth compound bows, since their design geometry makes it easy to provide for a wide range of setting adjustments. The draw length on the Apprentice 2 can be set to anywhere between 15" and 27", in 1" increments, making it perfect for children/youth and small-framed adults. If you are taller however, your draw length will most likely be 28" or higher, in which case this bow would not be a good choice. Noise Levels And Vibration When shooting the bow naked, it can be relatively loud. The use of Bear's Zero Tolerance Limb Pockets provides for extra cushioning and vibration reduction upon releasing the string. Using The Bear Apprentice 2 For Hunting Keep in mind the Apprentice 2 was not designed to be an ideal hunting tool. Most archers who opt to buy it will be using relatively low settings (draw weight and draw length), which means the bow will not be capable of delivering nearly enough kinetic energy to make it suitable for hunting purposes. The draw cycle is as smooth as it can get, and arrow clearance is excellent regardless of the bow's settings. The Apprentice 2 was never designed to be a speed monster. Value For The Money The Apprentice 2 delivers great value for the money. of draw weight is no longer a problem, this compound bow can be used to successfully take down even large game (black bear).
